BluID Mobile Identities Validation Process

2.0 | | January 21, 2022

Table of Contents

1   Introduction

Scope

The purpose of this document is to provide an overview of the BluID Mobile Identities validation process.

Prior to beginning development, it is highly recommended to review the validation documents so that you understand the process and the requirements.

In addition, the validation documents provide insight into best practices to develop a user-friendly and full featured BluID Mobile Identities application.

2 BluID Mobile Identities SDK Integration

Step	Notes
1.	**Complete Training** Prior to beginning the validation process, complete the BluBØX Training and review the validation process.
2.	**Review Validation Documents** - **BluID SDK Integration Validation Questions – Android** - **BluID SDK Integration Validation Questions – iOS** - **BluID SDK Requirements and Developer Test Plan** **Note:** These documents are contained within the SDK zip file on the BluBØX Developer Community under downloads
3.	**Plan Validation into the Release Schedule** It is recommended to ensure that you have **two weeks** built into your release schedule for SDK validations. Note, that if there are any failed mandatory requirements, this process can take longer than two weeks to complete.
4.	**Plan Scope of First Delivery** • The scope of the validation that is performed by Partner Services of your BluBØX integration is to ensure the application meets the mandatory requirements and provides a quality mobile access experience. BluBØX Partner Services will perform high level sanity testing of your custom application. It is highly recommended that integrators perform extensive testing of their app in their environment prior to beginning the validation process. • It is highly recommended that the first release of your BluBØX Mobile Identities application be a pilot with a target group of users to ensure the app works as expected in your environment.
5.	**Integrate and Complete Mandatory Requirements** BluID SDK Developer Test Plan document provides a summary of the Mandatory Requirements for SDK integrations. It is highly recommended to review these requirements prior to development. **Note**: **Best Practice** requirements are **considered optional**; however, implementing them in your custom application will provide a more full-featured, user-friendly, and easier to administer solution.
6.	**Submit Completed Validation Document** Once your integration with the SDK is completed, submit the filled validation questions and developer test plan documents to xxxxxxxxx
7.	**Validation by BluBØX for SDK** When you submit the questionnaire, please provide us with access to your application for us to test. This can be done over TestFlight, HockeyApp, as an APK or other app distribution method. • **Important:** Please ensure that we have all instructions to install and deploy the app to the phone to ensure there are no delays with the validation. • **Important:** We will test your application against our Readers with MOB0001 and MOB0022. We must be able to issue an invitation code to your app from our Production HID Mobile Identities platform. • If you have a manual entry field for an Invitation Code, then we will enter an invitation code from a Partner Services Organization • If you do not allow the user to manually enter an invitation code, then you must be able to setup a test account within your application that utilizes a production Mobile ID with either MOB0001 or MOB0022. Please provide instructions on how to logon to your app or any other important information so we can test.

Step	Notes
8.	**Partner Services Testing for SDK** • Once the validation documents and the custom SDK application are received, Partner Services will test the application based on the test cases defined in the validation document. **Note**: Please allow up to two weeks for testing your custom application.
9.	**Resolve Mandatory Requirements** • If any mandatory requirements are found to not have been met during Partner Services testing, Partner Services will provide a summary report to the integrator of the requirements that have not been met and must be resolved prior to being validated. • Once mandatory requirements have been resolved, it can take up to two weeks to re-test your application and provide validation approval.
10.	**Receive Validation Email** Upon successful validation, the Partner will receive a formal email notification indicating that their validation was successful. • Approval indicates that the Partner is approved by BluBØX to release their application to end users. **Important**: *Once a custom application has been validated, subsequent updates of the application in SDK, do not require additional validation by BluBØX Partner Services. Partners may make updates as they see fit; however, Partner Services reserves the right if there is a major platform change to BluID Mobile Identities to require a re-validation covering the platform changes.*
