# TOP 7 REASONS FOR
## Uniting Access Control with Video and Video Analytics

In the complex realm of security, access control and video surveillance have long been distinct entities, each with its own protocols and systems. Yet, when unified, they transform the security landscape, transcending the sum of their parts. This integration doesn't just add value; it multiplies it, embodying the principle that "1 + 1 = 3".

## 1. Enhanced Security with Real-time Verification

Instant visual confirmation aligns access events with live video. A swipe of an access card immediately reveals the user on video, providing an extra layer of security.
## 2. Streamlined Operations with Unified Platforms

Video Surveillance

Access Control

Visitor

Alarms Management

No more juggling between multiple platforms. Manage access and video feeds effortlessly from one platform, reducing errors and complexity.

## 3. Efficient Forensics

Having a seamless timeline of events matched with video evidence is invaluable. Seamlessly merge access logs with video for easy investigations and compliance.
## 4. Cost-saving Measures

Save on infrastructure and training with a centralized, all-in-one system.

## 5. Elevated User Experience

With consolidated reporting and an easy-to-use dashboard, managing users, credentials, and video becomes less cumbersome and more intuitive.

UX / UI

## 6. Harnessing Video Analytics

When combined with access control, opens the door to new possibilities- from loitering detection to real-time occupancy counts, the combined power of these systems unlocks new security insights.

## 7. Tailgating Detection

Spot unauthorized entries by matching the number of people with access credentials, immediately flagging any discrepancies.
